## Motivation in Brief

- Systems rely on complex infrastructures
  - *A lot of data and many processes, internal and external*
  - *As people communicate, underlying systems must too*
  - *But:*
    - *variety of data formants, technologies, protocols*
    - *variety of architectures, client-server, peer-to-peer, ...*
- Rapid changes in applications' functionalities
  - *modular development*
  - *reuse of application functionality*
  - *low costs – do it now and quickly!*
  - *Good performance*
    - *frequent changes in applications' loads, peek hours*
    - *scalability – effective load balancing*
    - *low costs – cheaper to outsource?*

## Scope

- Architectural and conceptual basis
  - *What is architecture – enterprise, processes, data, software*
