Motivation in Brief

- Systems rely on complex infrastructures
 - A lot of data and many processes, internal and external
 - As people communicate, underlying systems must too
 - *− But:*
 - → variety of data formants, technologies, protocols
 - $\rightarrow \textit{variety of architectures, client-server, peer-to-peer,} \dots$
- Rapid changes in applications' functionalities
 - modular development
 - reuse of application functionality
 - low costs do it now and quickly!
 - Good performance
 - → frequent changes in applications' loads, peek hours
 - \rightarrow scalability effective load balancing
 - \rightarrow low costs cheaper to outsource?
